### **3. 指數型認購(售)權證**

漲停價格 = 當日開盤競價基準 + (前一日標的指數之收盤指數 x 每點對應金額 x 行使比例 x 10%)

跌停價格 = 當日開盤競價基準 - (前一日標的指數之收盤指數 x 每點對應金額 x 行使比例 x 10%)

**4. 國外成分證券指數股票型基金、境外指數股票型基金為標的之認購(售)權證及外國證券或指數為標的之認購(售)權證, 採無升降幅度限制。**

**1. Limits on call (put) warrants for which the underlying is stocks or ETFs shall be calculated as follows:**

#### **(1) For call warrants**

**Limit-up price = Auction reference price at market open of a given day + (Limit-up price of the underlying security of a given day - Auction reference price at market open for the underlying security of a given day) × Exercise ratio**

**Limit-down price = Auction reference price at market open of a given day - (Auction reference price at market open for the underlying security of a given day - Limit-down price of the underlying security of a given day) × Exercise ratio**

#### **(2) For put warrants**

**Limit-up price = Auction reference price at market open of a given day + (Auction reference price at market open for the underlying security of a given day - Limit-down price of the underlying security of a given day) × Exercise ratio**

**Limit-down price = Auction reference price at market open of a given day - (Limit-up price of the underlying security of a given day - Auction reference price at**

market open for the underlying security of a given day) × Exercise ratio

**2. Fluctuation limits on call (put) basket warrants shall be calculated for each underlying security within the basket using the following formulas: (1)**

**(Limit-up price of each underlying security in the basket of a given day – Auction reference price at market open for each underlying security of a given day) × Sum of exercise ratios for each underlying security in the basket; and (2) (Auction reference price at market open for each underlying security of a given day – Limit-down price of each underlying security of a given day) × Sum of the exercise ratios for each underlying security in the basket. The larger of these two figures are plugged into the formulas in the preceding sub-paragraph to calculate the daily fluctuation limits.**

**3. Limits on index call (put) warrants for which the underlying is an index as announced by the TWSE shall be calculated using one of the following two formulas:**

**(1) Limit-up price for call (put) warrants = Auction reference price at market open of a given day + (Closing index of the underlying index on the previous day × corresponding monetary value per index point × multiplier × 10%).**

**(2) Limit-down price for call (put) warrants = Auction reference price at market open of a given day – (Closing index of the underlying index on the previous day × corresponding monetary value per index point × multiplier × 10%).**

	<p><b>4. No price fluctuation limit is imposed on call (put) warrants for which the underlying is an ETF comprising foreign securities, or an offshore ETF, or a foreign security, or a foreign index.</b></p>
